July					
August	15-0-5				
September					
October	10-0-5	General			
November					

\* NPK ratios should be exact or close, within 10 parts.

\*\* Best Practice is to apply preemergent herbicide twice during the winter months, once in early December and again in late February

\*\*\* Image should be applied twice, the first time by treating the entire lawn via garden hose spray, the second by spot treating problem areas 3-6 weeks later.

\*\*\*\* Do not apply in direct sunlight, or when daytime high temperatures are above 85 degrees Fahrenheit
